BASIC STATISTICS

COLLECTED LECTURES

Second revised and expanded edition

Professor Sonia Chipeva, PhD, author, 2024

DIRECT SERVICES

ISBN: 978-619-7780-05-5

Sofia, 2024

CONTENT

I. INTRODUCTION.....	5
1. Some historical notes.....	5
2. Object of Statistics.....	7
4. Subject of Statistics.....	8
5. Basic Statistical Definitions and Concepts.....	9
II. STATISTICAL RESEARCH.....	16
III. SURVEY AND REGISTRATION OF PRIMARY DATA.....	23
1. Preparation of Statistical Research.....	23
2. Primary Statistical Table.....	24
3. Survey.....	25
IV. DATA PRESENTATION.....	27
1. Statistical Grouping.....	27
2. Classifications of statistical groupings.....	28
3. Grouping procedure for Univariate grouping.....	30
4. Table of frequency distribution.....	40
5. Charts of frequency distributions.....	41
V. STATISTICS OF UNIVARIATE FREQUENCY DISTRIBUTIONS.....	45
1. Univariate Frequency Distribution.....	45
2. Classification of frequency distributions.....	46
3. Summary characteristics of univariate frequency distributions.....	48
VI. MEASURES OF CENTRAL TENDENCY.....	51
1. Arithmetic mean.....	52
2. Median.....	58
3. Mode.....	63
VII. STATISTICAL VARIATION.....	66
1. Absolute measures of variation.....	67
2. Relative measures of variation.....	69
3. Interpretation of the measures of variation.....	77
VIII. SHAPE OF FREQUENCY DISTRIBUTION – SKEWNESS AND KURTOSIS	81
1. Measures of skewness.....	81
2. Measures of kurtosis.....	85
3. Relation between measures of central tendency in a frequency distribution.....	87
IX. STATISTICAL INFERENCE.....	89
1. Basic concepts and definitions in the probability theory.....	89
2. Univariate probability distributions.....	96
3. Theoretical base of the statistical inference.....	102
4. Sampling.....	104

5. Random sample.....	105
X. STATISTICAL ESTIMATION.....	107
1. Principal concepts and definitions.....	107
2. Errors of parameter estimates.....	108
3. Point estimates of mean, variance and proportion.....	109
4. Sampling distribution and standard error of mean and proportion.....	111
5. Interval estimates of mean and proportion.....	115
6. Sample size for mean and proportion estimation.....	123
XI. HYPOTHESIS TESTING.....	126
1. Basic concepts and definitions.....	127
2. Procedure of hypothesis testing.....	134
XII. HYPOTHESIS TESTING ABOUT POPULATION MEANS AND PROPORTIONS.....	136
1. Hypothesis testing about one population mean or proportion.....	136
2. Hypothesis testing about the difference between two population means or proportion.....	148
XIII. STATISTICAL STUDY OF CORRELATIONS. ANALYSIS OF VARIANCE	159
1. Relationships – definitions, concepts and classifications.....	159
2. Analysis of variance - concepts, classifications and requirements of application.....	162
3. One-way ANOVA procedure.....	164
XIV. REGRESSION ANALYSIS.....	173
1. Basic concepts and definitions.....	173
2. Procedure of simple regression analysis.....	175
3. Parameters estimation in a regression model.....	179
4. Complementary procedures in regression analysis.....	181
5. Simple linear regression model.....	182
XV. MEASURES OF CORRELATIONS	187
1. Pearson's correlation coefficient.....	187
2. Brave's correlation coefficient (linear correlation coefficient).....	188
3. Coefficient of determination.....	189
4. Coefficient of indetermination.....	189
XVII. TIME SERIES ANALYSIS.....	190
1. Introduction.....	190
2. Elementary measures for time series movements.....	191
3. Components of time series.....	195
4. Statistical trend analysis	199
5. Linear Trend Model.....	204
6. Analysis of the seasonal component.....	208

RECOMMENDED LITERATURE.....	213
STATISTICAL TABLES.....	214
